

Plastic PVC Wood WPC Door Panel Making Machine

Plastic Pvc Wood Wpc Door Panel Making Machine Is Mainly Used For The Width WPC Door And Windows Board Extrusion. WPC Door And Windows Board Production Line Includes The Following Major Parts: Conical Twin Screw Extruder, Vacuum Forming Table, Spary Cooling Tank, Board Haul Off Machine, Board Cutting Machine, Board Stacker.

Plastic pvc wood wpc door panel making machine is mainly used for the width WPC door and windows board extrusion. WPC door and windows board production line includes the following major parts: conical twin screw extruder, vacuum forming table, spary cooling tank, board haul off machine, board cutting machine, board stacker.

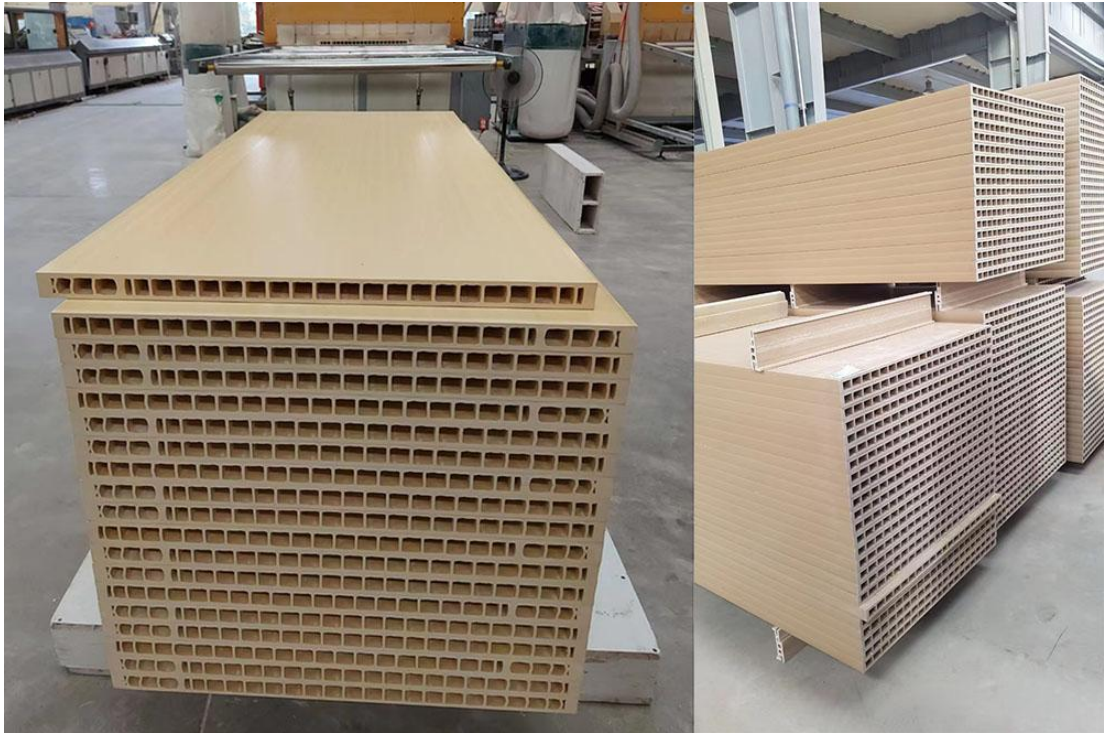

Application Of Plastic Pvc Wood Wpc Door Panel Making Machine

This Plastic pvc wood wpc door panel making machine is used for making WPC door panels from PVC and wood powder, the WPC hollow panel can be used either inner and outer door panel, partition, windowsill etc.it centralizes the characters of both plastic and wood, and also overcomes the shortage of wood, such as water –proof, corrosion resisting, anti-moth, anti-aging, static-free, and flame retarded.

This WPC PVC door production line is applicable to the continuous extruding of WPC/PVC door panel, clapboard 'elbow board. Proper double screw extruder, specially used for extruding wood plastic products, should be chosen in accordance with the panel section, application, and product specific gravity. Also the corresponding auxiliary

machines such as vacuum calibrating platform, hauling off machine, cutting off machine, material reversing platform,etc. are equipped. Products of diversified specification can be produced with different dies..

The wood working machines can be used for processing the WPC hollow panel into finished WPC doors, such as sanding machine, CNC engraving machine, laminating machine, painting machine, after all processing, you shall get finished WPC doors as below:

WPC Door Panel Extrusion Line For WPC PVC DOOR MAKING MACHINE

The WPC door panel extrusion line includes the below parts:

- 1, mixing machine for WPC PVC door making machine: high speed heating and cooling mixing
2. Feeder and extruder for WPC PVC door making machine: conical double screw extruder with high capacity design for WPC production.
- 3, die and mold for WPC PVC door making machine: you can change the mold for making different size of door panels.
- 4, calibrating machine for WPC PVC door making machine: vacuum and water cooling for high capacity production
- 5, haul off machine for WPC PVC door making machine: high power haul off device is specially designed for WPC door production.
- 6, cutting machine for WPC PVC door making machine: the cutter should be designed with high quality saw.
